

1. Precision Glide Surface

The Evoluent Wrist Comfort Mousepad has a sheet of proprietary low friction material that enables much more precise control of mouse movements.

2. Extra Large Wrist Support

The gel support on the Evoluent Wrist Comfort Mousepad is softer than typical wrist supports to avoid creating a pressure point. It is also extra deep between the front and back edges to spread the weight of your arm and hand along a much larger area of your arm.

3. High Density Acrylic Base

The Evoluent Wrist Comfort Mousepad is made of a high density and rigid acrylic base that provides a perfectly flat gliding surface, regardless of the unevenness of a desk

4. Truly Non-Slip Bottom

The Evoluent Wrist Comfort Mousepad has full width, special high traction material on the bottom that positively prevents the mousepad from moving.

Aligns Hand with Forearm

The wrist support on the Evoluent Wrist Comfort Mousepad lifts your forearm slightly to help align it with the hand.

Item # MP1
