

Pencllic Professional Typist MK1™

Pencllic Professional Typist combines high quality mechanical keys with ergonomic "tenkeyless" design for the faster typist that required the best computer accessories.

Pencllic Professional Typist MK1 is developed for you. Whether you are an engineer writing reports, journalist writing articles, or anyone else who uses a keyboard a lot, you require the best tool for the job. The brown mechanical keys give a distinct feel for when you have pressed far enough and are more responsive than membrane alternatives and the keystroke sound suitable for the office environment. These features enable users with extra nimble fingers to type superfast. At the end of the day you have more work done or had more time to think and play.

Pencllic Professional Typist MK1 has a "tenkeyless" design which positions the user in a more centralized working position for a better ergonomic position. A key element to a great ergonomic working position is to not have to reach too far the computer mouse and also work within the shoulders.

Ergonomy is about finding the most suitable working tools for every individual. Pencllic thrive to have at least one product meeting every persons need, combining it with contemporary Scandinavian style and high end technology.

Faster results – Have time to play
