SupportTech™

SEAT CUSHION

Introducing SupportTech™

This unique cushion was created with your comfort and well-being in mind. The SupportTech™ features the patented PostureLITE™ seating system. An ingenious valve system regulates air flow in and out of a specialized chamber in the seat cushion which provides ergonomic, customized body-conforming support. The cushion is topped with a thin layer of memory foam for enhanced, personalized comfort.

This patented technology provides proper pelvic support which promotes ergonomically correct posture and helps reduce the risk of severe lower back pain.

Feeling Great = Increased Productivity

Conforming Support

SupportTech™ features the exclusive PostureLITE™ Comfort Control system which allows you to personalize your comfort by adjusting the air contained inside the seat cushion.

Adjustable Comfort

Once you've found your optimum comfort level, simply close the valve and the cushion conforms to your exact shape to provide pressure-relieving support.

Pressure Relieving Memory Foam

The SupportTech™ seat cushion features a layer of memory foam to reduce pressure points and provide personalized comfort.

Sit Straight. Feel Great.
